One of the most useful new tools, another of the 100s of little features included in the app, is the ability to add a unique text over your entire canvas. Often these can be useful to indicate an annotation. One of the main improvements offered for this version is the new Node tool. It’s used to click-and-drag an image area and draw around it. It’s available in the **Image/Draw Tools** section of the window, but continues to be in the **Edit/Draw** section for the drawing pencil. Note that this feature is not available in all image formats, including some in the .psd format. To access this tool, a square or freehand rectangle must be outside the image (an image cannot extend to the border of its canvas) and held down. The **P** key is one you use to activate the new tool, and the **Q** key is used to activate and deactivate the tool. You can change the appearance of the Node -- the background shapes are now customizable -- as seen in the photo above. Photo books are the way I like to keep my collection organised. The number of items in my “Books” folder can range from 70 to 300 items, potentially, and that’s just me working on smaller images; the one on the left (see below) has nearly 700 items.
